

Virtual and Managed/Dedicated Windows Servers

Leading Windows Hosting Solutions

Simplex leads the industry in Windows-based hosting solutions with numerous options and a practical growth path that allows you to move from a shared account to a virtual or dedicated hosting server without the need to master new technologies. Simplex's Virtual and Dedicated Windows Web Servers, offered through our cooperation with Verio^{*1}, feature MultiSite Pro subhosting technology and provide a dedicated operating system and hardware to deliver premier options for companies aiming to develop high-performance sites.

Product Details

- **Ease-of-Use and Scalability** - upgrade your account from a shared hosting plan to a Windows® Web Server with ease
- **MultiSite Pro SubHosting technology** - includes the following features: server resource control, disk quota management, custom log controls, site isolation and bandwidth compression.
- **Multiple Application Pools (App Pools)** - Multiple App Pools provide account owners with easy-to-use site isolation, site grouping, and sandboxing functions.
- **Resource Virtualization Units (RVUs)** - RVUs permit you to allocate all of your account resources (CPU and RAM) to one primary web site, or divide your resources among multiple sites or site groups.
- **Windows Resource Dashboard** - view server CPU and Memory performance (RAM) for the last hour, or check real-time resource usage of your account.
- **.NET Framework** - Microsoft Web Development technology for design and development.
- **Email Server** - each Windows Web Server includes a separate virtual Email server which provides additional storage for email, unlimited POP accounts and Email server controls. Also, includes spam protection provided through SpamAssassin and RBLs (Realtime Blackhole Lists).
- **Marketing Tools** - includes Search Engine Submission, 5000 Banner Impressions, and Real-Time Marketing campaign reporting statistics.
- **MySQL** – MySQL is the world's most popular open source database.
- **URL Rewrite** – ISAPI_Rewrite 3 is an Apache .htaccess mod_rewrite for Windows. It is used for search engine optimization, to proxy another server's content, to stop hotlinking and to strengthen site security.
- **PHP Starter Kits** – This includes popular applications like WordPress, Joomla, MediaWiki, PHPEventCalendar and GeekLog.

VWS: Virtual Windows Server. The physical server/hardware is shared among multiple VWS accounts. Account densities (how many VWS on a single machine) vary based on plan

MWS: Managed (Dedicated) Windows Server. The physical server/hardware is dedicated to a single customer.
